

Invasion : Code Name X

Team 7 : White Midi

- Xie Shaokang
- Xiong Muxin
- Yang Yixuan

Basic Operations

- **WASD** for basic movement
- **Left Click** for shooting
- **M** to build your own tower
 - Each purchased tower demands **200 money** and you will gradually gain money with time goes by.
- **Q** to shoot with a special bullet
 - The special bullet can hurt the turret with much more power but it need **3 second** to cooldown.
- **Esc** to quit the game

Network Connecting

For better gaming experience, we set up 9 server and one for each team, so two of each team can download the specific EXE file in QQ group or onedrive and play.

Objective

Break the crystal after destroying the turrets.

Bug Exist

For our limited ability, there are still some bugs in our games.

- When network stuck, the bullets spawned from the turret or crystal would travel in a ridiculously low speed.
- Because network delay, the client's bullet may suffer from delaying problem, making it seem like not spawn from the client hero's body.
- The collision of the client's wall may seem like a bit larger than it should be.

Further Development

All people are welcomed to visit and download our source code in our [github page](#) and you are welcomed to join our game development by submitting pull request or just putting forward improvement idea.
